

At Avante Behavioral Health Plan (ABHP) we work at providing our consumers with the highest quality of care. When it is determined what the optimal treatment strategy is, we incorporate the clinical judgment of the treatment team with the ABHP's LOC Guidelines to determine the appropriate course of treatment. We strive to provide the most comprehensive treatment possible at the least invasive level of care necessary to ensure safe and effective treatment. In creating these guidelines ABHP incorporated information from a variety of sources (American Psychiatric Association, American Academy of Child & Adolescent Psychiatry, Association American Psychological Association, National Mental Health Association, the National Association on Mental Illness and others scientifically-based resources). At Avante, we recognize that every situation and consumer has different needs. Hence, we tailor our treatment recommendations to accommodate the biopsychosocial needs of our consumers.
